A note from Brian:

Puppy creator, Barry Kauler, compares and discusses the 3 main flavours of Puppy Linux at this link

<http://bkhome.org/blog/?viewDetailed=02556>

Whichever ISO file you download, use Unetbootin (see above) to create a bootable flash drive or SD card, or use

<http://www.imgburn.com/index.php?act=download>

and select Mirror 7, for a utility to burn the ISO file to a CD or DVD disk.
